1.0 INTRODUCTION

1.1 Authorization

The Energy Engineering Analysis Program (EEAP), Lighting Survey of Selected Buildings at Pine Bluff, Arsenal, was authorized by the U.S. Army, Little Rock District, Corps of Engineers, under Contract Number DACA01-94-D-0038. Delivery Order Number 0001, dated 29 September 1994.

1.2 Objectives

The objectives of this Delivery Order (D.O.), as shown in the Detailed Scope of Work (Appendix A, Volume II) are as follows:

- A. Perform a site survey of 45 buildings selected by Arsenal personnel. The purpose of the site survey is to gather sufficient data to permit evaluation of possible Energy Conservation Opportunities (ECOs).
- B. Evaluate possible and new ECOs.
- C. Combine ECOs into recommended projects.
- D. Prepare a comprehensive report to document the work performed, the results and the recommendations. The final report is to contain funds programming documentation.

1.3 Phases of Work

The work performed under the contract has been divided into three phases:

- Phase I--Field Investigation and Data Gathering.
- Phase II--Data Analysis. Analysis of data, identification of potential projects, performance of feasibility and economic studies and preparation of Life Cycle Cost Analysis forms. During this phase, all potential projects which produce energy and/or dollar savings will be identified and evaluated as to their technical and economical feasibility. Projects will be ranked according to the highest saving investment ratio (SIR) value.
- Phase III--Report Preparation. Complete documentation of work accomplished. Project documentation for all justifiable ECOs.

1.4 Submission Requirements

The study is divided into three submissions.

- A. Interim Report
- B. Oral Presentation
- C. Final Report

1.5 Work Accomplished

An entrance meeting was held with the Corps of Engineers (COE) Project Manager and personnel from the Arsenal Engineering Plans and Services to discuss the scope of work, and work plans and schedules for the field survey.

The initial field survey of the Arsenal was performed from 15 November 1994 through 18 November 1994. During that time, a team of four engineers from Reynolds, Smith and Hills, Inc. (RS&H) performed tests, made observations and conducted interviews with installation personnel.

An additional field survey was conducted on 9 December 1994 through 11 December 1994.

The exit meeting was held with COE and Arsenal personnel after the December survey.

Since that time, work has been performed in the analysis and documentation phases of the project. This included ECO evaluation, Life Cycle Cost Analysis, and documentation of the results and site survey observations. The results of these efforts form the Interim Submittal.

1.6 Report Organization

The report consists of five volumes. Volume I, the Narrative Report, contains the results of all of the site surveys, analysis and project development. The Detailed Scope of Work, Prenegotiation Minutes and all backup data and calculations are found in Volume II. The site survey notes are in Volume III. Project documentation is contained in Volume IV. An Executive Summary volume is also included.

Volume I, the Narrative Report is organized as follows: Following a brief introduction in Section 1.0, the existing conditions at Pine Bluff Arsenal are discussed in Section 2.0. This includes a description of the installation, current and past energy use patterns. Section 3.0 describes the techniques used to perform this study. Section 4.0 contains the results of the analysis of the energy conserving opportunities (ECOs). The ECO Implementation Plan and the effects on energy use at the Arsenal are located in Section 5.0. Section 6.0 contains illuminance calculations for each building. Section 7.0 summarizes the proposed modifications for each building. Section 8.0 contains the review comments for the Interim Submittal and responses thereto.

2.0 EXISTING CONDITIONS

2.1 <u>Installation Description</u>

Pine Bluff Arsenal, located in Pine Bluff, Arkansas, is an installation of the Armament, Munitions and Chemical Command. The Arsenal is a government-owned, government-operated installation, with the primary function of loading and packing munitions.

2.2 Facilities Description

As reported in fiscal year 1994, the Arsenal had 537 buildings comprising approximately 2,397,000 square feet of floor space. The lighting survey was conducted over portions of 45 buildings, totaling 424,823 square feet, or approximately 18 percent of the Arsenal's floor space. The surveyed buildings are listed below:

			Sı	urveyed

2.3 <u>Historical Energy Use and Costs</u>

All historical energy use and cost data were gathered from the U.S. Army Data DEIS (Defense Energy Information System) system, or ADDS.

2.3.1 Energy Use. Total facility and production energy consumption at Pine Bluff Arsenal increased by approximately eight percent from FY 85 through FY 94 (Figure 2-1). The causes were due to increase of four percent in the use of thermal energy and electricity, which increased 43 percent over the same time period.

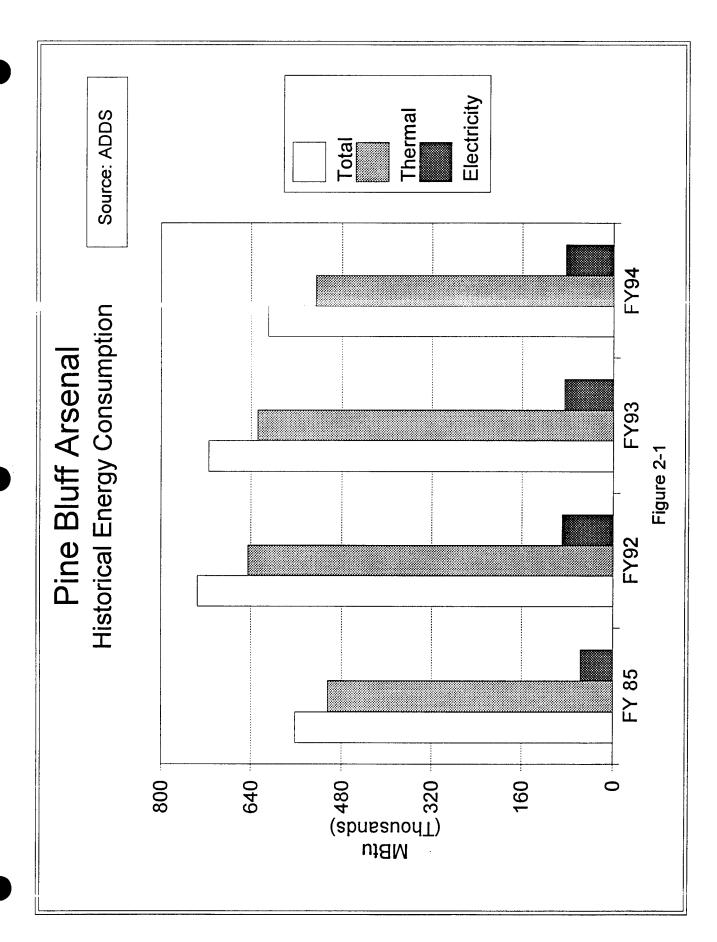

Monthly consumption of heating fuels and electricity for FY 94 is shown in Figure 2-2. The dependence of heating fuels on weather is apparent, although thermal energy is required during the summer months for production and other uses. Electricity use is fairly constant throughout the year, with slight increases occurring in the summer months due to air conditioning.

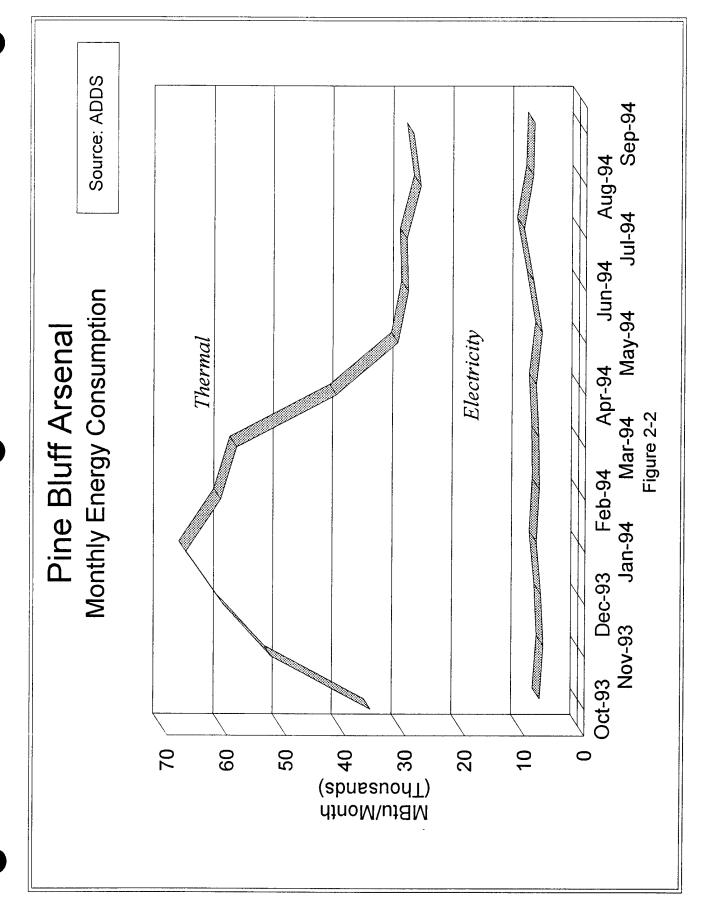

Percentages of fuel use for FY 94 are shown in Figure 2-3. The heating fuels accounted for approximately 86 percent of energy use in that year and electricity the remainder.

2.3.2 <u>Costs</u>. Total annual energy costs at Pine Bluff Arsenal, \$3,085,671 in FY 94, have increased ten percent over the FY 85 values (Figure 2-4). Electricity shows the greatest increase, approximately 69 percent from FY 85 through FY 94. Unit prices for electricity showed an increase of 18 percent from FY 85 through FY 94 (Figure 2-5).

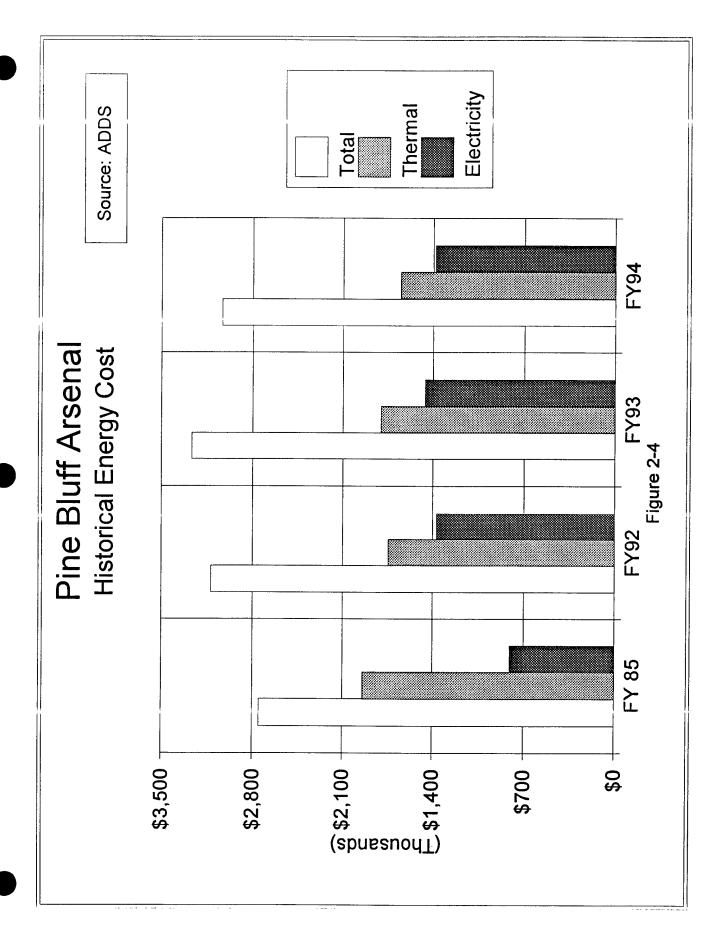

Figure 2-6 displays monthly energy costs at Pine Bluff Arsenal. As in the case of consumption, heating fuel costs vary widely, depending on weather. Electricity costs are a significant portion of the monthly costs, and can range from 35 percent of the monthly total to more than 60 percent. Electricity costs are a significant percentage of the total annual energy bill because of the higher unit price. In FY 94, electricity costs represented 74 percent of the total buildings expense of \$1,650,000 (Figure 2-7).

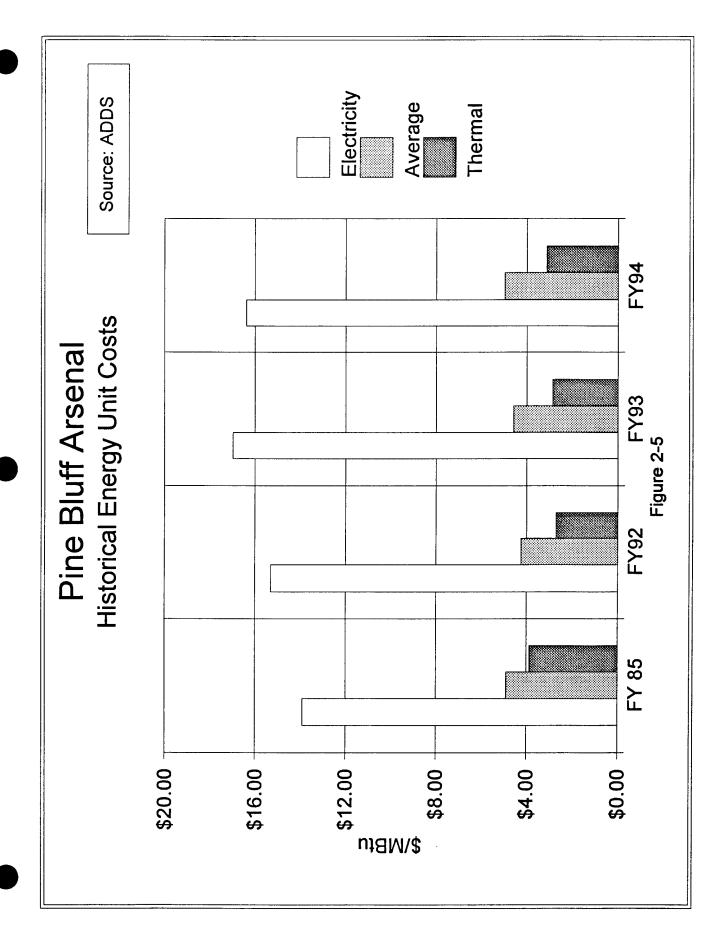

2.3.3 <u>Electric Rate Analysis</u>. Electricity at Pine Bluff Arsenal is provided by Arkansas Power and Light to three substations--A, B and C. The rate analysis was done for charges from the A and B substation, since the buildings surveyed are served from those substations.

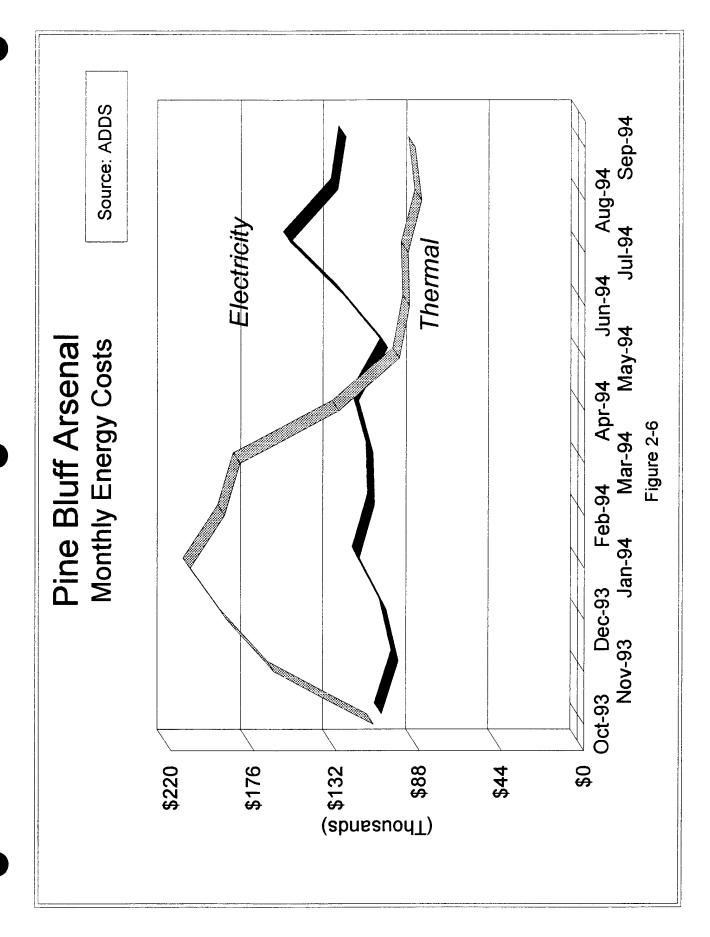

Source: ADDS Bldg. Elect. (84,288) FY 94 Buildings Energy Consumption Pine Bluff Arsenal Figure 2-3 Thermal (525,740) Values in MBtus

Bldg. Elect. (\$1,385,694.72) FY 94 Buildings Energy Costs Pine Bluff Arsenal Figure 2-7 Thermal (\$1,650,823.60)

The bills have many categories of charges; for analysis purposes, the charges are included in either the demand or energy portions of the bill. Two rates are charged; a winter rate for the Months October - May, and a summer rate for June -September. Bills from January 1995 and August 1994 were analyzed with the following results:

	Summer	<u>Winter</u>	Annual Average
Demand	\$14.13/kW	\$12.58 kW	\$13.36/kW
Energy	\$0.0343/kWh	\$0.0258/kWh	\$0.0301/kWh
Average	\$0.084 6/kWh	\$0.475/kWh	\$0.0661/kWh

From the two bills analyzed, demand charges constituted 46 percent of the January 95 total amount, and 59 percent of the August 94 amount. The annual average rate was used to evaluate the ECOs in this report.

Details of the analysis are contained in Volume II.

3.0 METHODOLOGY

3.1 Data Collection

The first phase of this project was to collect information concerning the lighting fixtures in the 45 surveyed buildings and their use. Data collected included building lists and drawings. Energy data and prices were collected from Arsenal personnel, Arkansas Power and Light Company and the Army Data DEIS System.

3.2 Site Survey

The site survey effort was divided into two, two-person teams: three mechanical engineers and one electrical engineer comprised the four team members.

Each team was assigned buildings based on floor space, so that each team surveyed approximately the same amount of space. Room-by-room surveys were conducted in each of the 45 buildings, and data collected on survey sheets. All survey sheets are contained in Volume III of this report.

3.3 Energy Analysis

- **3.3.1** <u>ECOs</u>. Energy savings for ECOs were calculated using standard methods documented in a variety of engineering texts including the ASHRAE Handbooks. Cost estimates were developed using 1994 Means Cost Data or through equipment vendors' quotes. The reference year for all cost estimates are 1995. Energy prices are based on FY 95 rates.
- 3.3.2 <u>Economics</u>. Economic evaluations were performed using Version 1.0, Level 92 of the Life Cycle Cost in Design (LCCID) computer program available from the BLAST Support Office, Department of Mechanical and Industrial Engineering, University of Illinois at Urbana-Champaign. LCCID calculates life cycle costs, simple payback and SIR for use in evaluating energy conservation opportunities in DOD construction.
- **3.3.3 <u>Lighting Calculations</u>**. Lighting level calculations were done using a PC-based program supplied by USI Lighting, Lite-Pro. Point-by-point calculations were done for each room that was surveyed for two cases: (1)

existing fixtures in the room, and (2) energy-saving fixtures. Lighting changes made in each room designed to meet lighting levels required by AEI design criteria, shown in Table 3-1.

4.0 ENERGY ANALYSIS

4.1 <u>Energy Conservation Opportunity (ECO) Evaluations</u>

Each of the ECOs listed in the Scope of Work were reviewed for their applicability and potential for significant energy savings and cost effectiveness and are listed in Table 4-1.

For each of the evaluated ECOs, energy savings were calculated, cost estimates made and Life Cycle Cost (LCC) Analyses performed. A listing of evaluated ECOs along with a summary of the energy and cost savings analysis is shown in Table 4-2. Backup data and calculations are contained in Appendix B, Volume II. Several investigations were made as part of ECO Number 1.

TABLE 4-1 ECOs EVALUATED

	<u>Investigation</u>	<u>Evaluation</u>
1.	Remove unneeded lamps or fixtures.	ECO 1
2.	Reduce indoor lighting where illumination exceeds AEI recommended levels.	ECO 1
3.	Increase daylighting.	ECO 2
4.	Lower light fixtures.	ECO 1
5.	Improve reflection and dispersion with light-colored ceiling and walls	ECO 3
6.	Install occupancy sensors.	ECO 4
7.	Install photocells to lighting near windows	ECO 5
8.	Install additional switches to control lighting arrangements.	ECO 6
9.	Use time clocks to shut off exterior building lights.	ECO 7
10.	Replace incandescent lamps with compact fluorescent lamps.	ECO 1
11.	Replace incandescent exit sign fixtures with LED fixtures.	ECO 8
12.	Replace incandescent lamps in exit signs with compact fluorescent lamps.	ECO 8
13.	Replace standard fluorescent lamps with energy-conserving lamps.	ECO 1

14.	Replace standard fluorescent ballasts with electronic ballasts	ECO 1
15.	Replace existing fluorescent fixtures with new fixtures having efficient reflectors, electronic ballasts, and energy-conserving lamps	ECO 1
16.	Use more efficient lighting source, i.e., upgrade from incandescent to fluorescent, from fluorescent to HID, from mercury vapor to high-pressure sodium, etc.	ECO 1

ECO Number 1 UPGRADE OR REPLACE LIGHTING

Discussion

As shown in Table 4-1, several investigations for energy conservation opportunities were combined into one ECO. Data were taken in each room of each of the 45 surveyed buildings to determine the type and condition of the existing luminaires, representative illumination levels (footcandles) representative types of lamps and ballasts, the room dimensions, the height and location of the fixtures, and the type and accessibility of switching. Notations were done on RS&H-provided data forms, and photographs were taken where allowed by security. Drawings were provided by the Arsenal's Engineering Plans and Services and were also used to note fixture positions. The survey forms are contained in Volume III of this report. Fixture positions in each room were input to the analysis program, and are contained in Volume II, Appendix B.

A PC-based computer program, "Lite-Pro," provided by USI Lighting Company, was used to analyze the illumination levels point-by-point and the unit power density within each room. The program also keeps track of the number of fixtures, by type, for each building and each room.

Initially, analyses were done for the existing luminaires. Although the photometric data base of Lite-Pro is extensive, it was not possible to match existing fixtures exactly to the data base because of lack of manufacturers names and model numbers. Fixture types were noted during the site survey, however, and similar fixtures were selected for analysis. Calculated illuminance levels were reasonably close to those noted on the site survey data sheets, given the wide range of conditions and lifetimes of the existing fixtures.

Point-by-point analysis was then done for each room with the following criteria:

- 1) Illuminance levels were to be brought into line with AEI recommendations shown in Table 3-1. In many cases, present levels are too high.
- T8 lamps and electronic ballasts would replace existing T12 lamps and electromagnetic ballasts, including energy-saving lamps and ballasts already in place. The T12 and electromagnetic-technologies should be phased out and the T8 technology adopted installationwide.
- 3) Existing fixtures would be used where possible. If illuminance levels were reduced, lamps would be removed; reflectors would be installed if necessary to meet AEI footcandle (FC) recommendations. Fixtures would be moved if practical and necessary.
- 4) Higher-efficiency fixtures would replace low-efficiency fixtures were practical.
- 5) Compact fluorescent lamps would replace incandescent lamps where practical. Exceptions were made for fixtures with low utilization (e.g., janitors' closets).
- 6) Excessive fixtures would be removed where necessary.
- 7) Annual hours of operation for each building were assumed to be 2500. This was based on a 48-hour per week operation 52 weeks per year, based on interviews with personnel in each building.

Table 4-3 shows a summary of the changes made by building based on analysis result. In all:

- 1) 843 fixtures are removed, and 641 installed. The installed fixtures are various energy-efficient types, and include compact fluorescent replacement of incandescent lamps. All new fixtures employ T8 technology.
- 2) 3,109 fixtures are changed (upgraded); 8,776 lamps and 4,475 ballasts are removed, and 6,464 T8 lamps and 3,109 electronic ballasts installed; 270 reflectors are also installed in existing fixtures. Of the 8,776 lamps removed, it is estimated through

sampling the majority of fixtures, that approximately 90 percent are standard and 10 percent energy-saving varieties.

Summary tables for fixture changes in each building, by room, are contained in Section 6 of this Volume.

Table 4-4 is a summarization of the energy analysis results, by building. The table shows comparisons between the existing lighting systems and the proposed replacements:

- 1) Average unit power density for the 45 buildings will be reduced from 1.3 W/sf to 0.7 W/sf.
- 2) Total luminaire wattage will be reduced from 565 kW to 271 kW.
- Annual energy use, assuming 2,500 hours per year average use per fixture, will be reduced from approximately 1,411,620 kWh/yr to 676,925 kWh/yr.

Details of the fixture changes made in each room are contained in Volume II. Room numbers are amended by the designation "-N" to note the analysis of changed fixtures. Analyses for each room are presented together; present fixtures followed by the changed fixtures. Cost summary sheets for each building are also contained in Volume II.

The life cycle cost (LCC) analysis price was \$0.0687/kWh, given by the Army procurement Power agency as the 1995 electricity price at Pine Bluff Arsenal. All cost estimates are in 1995 dollars. They were escalated to the assumed mid-point of construction(1996) in the project documentation (Volume IV).

Recommendations

The life-cycle cost analysis program, LCCID 1.092, was used to determine the costs/benefits of the fixtures replacement. Based on the energy savings to Pine Bluff Arsenal, it is recommended that the project be implemented. The ECO showed the following costs/benefits:

Construction Costs (\$)
Energy Savings (MBtu/yr)

\$353,750

                                                                        633456.
7. SAVINGS TO INVESTMENT RATIO
                                          (SIR) = (6 / 1G) =
                                                                       1.79
    (IF < 1 PROJECT DOES NOT QUALIFY)
```

Electricity	2,508
Energy Cost Savings (\$/yr)	50,500
SIR	1.8
Simple Payback (years)	6.7

Energy cost savings include the savings from the reduction in A/C loads (estimated at \$2,600 per year). Economic life of the project was assumed to be 15 years.

ECO Number 2 INCREASE DAYLIGHTING

Discussion

No opportunities were observed to cost-effectively increase daylighting to accomplish energy savings.

Recommendations

This ECO is not recommended.

ECO Number 3 LIGHT-COLORED CEILINGS AND WALLS

Discussion

The use of light-colored ceilings and walls are a means of increasing the reflectance of light fixtures. However, point-by-point calculations show only marginal increases from light-colored walls compared to increasing the fixture's efficiency.

Recommendations

It is not recommended to re-paint or install new ceilings based on energy savings. Whenever painting is done as a part of building maintenance, use of light-colored paints are recommended.

ECO Number 4 OCCUPANCY SENSORS

Discussion

The site survey revealed that lights were on in many unoccupied areas. Candidates for occupancy sensors are restrooms, breakrooms, conference rooms and offices. Screening calculations showed that occupancy sensors in restrooms and breakrooms offer potential simple paybacks within the ten-year limitation.

Recommendations

The LCC analysis program, LCCID 1.092, was used to determine the costs/benefits of the installation of occupancy sensors. A 15-year economic life was used, and an electricity price of \$0.0687/kWh. Based on the energy savings to Pine Bluff Arsenal, it is recommended that the project be implemented. The ECO showed the following costs/benefits:

Construction Costs (\$)	\$14,019
Energy Savings (MBtu/yr)	
Electricity	581
Energy Cost Savings (\$/yr)	11,700
SIR	7.9
Simple Payback (years)	1.5

ECO Number 5 INSTALL PHOTOCELLS

Discussion

Screening calculations for this ECO showed that the measure would not be cost effective. The costs of controls, the sensor, and dimming ballasts make the simple payback in excess of 30 years for a typical south-facing office with windows (having four, two-lamp T-8 fixtures).

Recommendations

Based on costs/benefits, this ECO is not recommended.

ECO Number 6 INSTALL ADDITIONAL SWITCHING

Discussion

Most areas observed had adequate and available switching. Opportunities for this ECO are limited.

Recommendations

This ECO is not recommended for implementation.

ECO Number 7

INSTALL TIME CLOCKS FOR EXTERIOR BUILDING LIGHTS

Discussion

Virtually all exterior lights of the 45 buildings were off during daylight hours, as observed during the survey.

Recommendations

This ECO is not needed and is not recommended. Education of building occupants is the most effective measure.

ECO Number 8 LED EXIT SIGN LAMPS

Discussion

The majority of exit signs in the 45 surveyed buildings contain two, 15-watt incandescent lamps. LED lamps are a low-cost, energy-efficient retrofit. It was noted that many exit signs are burned out, and many exits do not have signs.

A survey of the drawings show that there are a total of approximately 225 exits in the 45 buildings. Ten of the exits have radioactive signs, and 55 have existing signs. This project is for retrofits of the 55 signs, only.

Recommendations

Based on the cost/benefits to Pine Bluff Arsenal, it is recommended that ECO Number 8 be implemented. The ECO shows the following costs/benefits:

Construction Costs (\$)	\$2,454
Energy Savings (MBtu/yr)	
Electricity	46
Energy Cost Savings (\$/yr)	932
SIR	4.6
Simple Payback (years)	2.6

4.2 <u>Multiple ECO Project Evaluations</u>

ECIP Number 1 LIGHTING RETROFITS

Discussion

This project combines several ECOs as listed below:

ECO #	ECO Description
1	Upgrade or Replace Lighting
4	Occupancy Sensors
8	LED Exit Sign Retrofits

Detailed discussions are contained in the previous section (4.1).

Recommendations

The life-cycle cost analysis program LCCID 1.092, was used to determine the cost/benefits of this ECIP. Based on the energy savings to Pine Bluff Arsenal, it is recommended. The results are summarized below.

Construction Cost	\$370,226
Annual Energy Savings (MBtu/year)	
Electricity	3,135
Annual Energy Cost Savings (\$/year)	\$63,108
SIR	2.0
Simple Payback (years)	5.9

STUDY: PBA01

LIFE CYCLE COST ANALYSIS SUMMARY

5.0 ENERGY PLAN

5.1 Project Packaging

The ECOs listed in Table 4-2 are recommended for packaging into a single ECIP project. The guidelines to qualify as an ECIP project are project cost greater than \$300,000, simple payback less than ten years, and SIR greater than 1.25. This project is programmed for FY 96 funding.

5.2 Energy and Cost Savings

The implementation of all projects yield a total annual energy savings of 3,135 MBtu and annual cost savings equal to \$62,875, which represents a reduction of 3.6 percent and 4.4 percent, respectively in total electrical energy use and cost when compared to FY 94 values. Based on FY 94 values, the energy use and costs before and after project implementation are shown in the following table:

TABLE 5-1 EFFECTS OF PROJECT IMPLEMENTATION

	BEFORE	AFTER	% REDUCTION
Electricity Use (MBtu/yr)	86,045	82,410	3.6
Electricity Cost (\$/yr)	1,414,909	1,352,034	4.4

Source: ADDS

5.3 Project Schedule

The project implementation date is estimated to be FY 96.

6.0 BUILDING CALCULATIONS

As explained in Section 4, illuminance calculations were performed for the fixtures in each room in each of the surveyed buildings, for both the existing fixtures and the proposed fixtures, either changed or retrofitted. Tables are presented on the following pages for each building showing the observed and calculated illuminances within each room. The table headings are as follows:

Room - Room number on description.

<u>AEI Classification</u> - Room classification according to Table 3-1. Several classifications of rooms are not noted on the AEI classification list provided by the Corps of Engineers, and are left blank. Efforts were made to provide illuminance levels based on usual activities (e.g., 75 FC for a laboratory).

<u>Maximum Required FC</u> - Maximum required footcandles according to AEI standards. The AEI requirement is for "...general illumination levels...will not exceed the intensities shown in Table 12-4" (reproduced as Table 3-1).

 $\underline{\text{Maximum Meas. FC}}$ - The maximum footcandles measured during the site survey. All measurements and calculations were done at a height of 2.5 feet above the floor. See the site survey data forms, Volumes IIIA and IIIB.

<u>Present Avg. Calc. FC</u> - The average footcandles calculated for the present fixture layout. The average FC calculations are always lower than the maximum. To get a more complete view of the light distribution and intensity within each room, see the detailed calculations contained in Volumes IIA through IIE. It was assumed that all lamps and ballasts were functioning. Reflectances were assumed to be the following: ceiling, 0.8; walls, 0.5; floor, 0.2. If ceilings were very dirty, reflectances were reduced to 0.2.

<u>Present LLF</u> - The light-loss-factor (LLF) used for each of the present fixtures. The LLF is the product of the ballast factor, the lamp depreciation factor and the dirt depreciation factor. For electromagnetic ballasts, the factor is usually set at ~0.95. The lamp depreciation and the dirt depreciation are somewhat subjective. For new or fairly-new lamps, the depreciation factor is usually set at 0.9 to take into account at 10 percent light loss over the average lifetime of the lamp. Dirt depreciation is a function of fixture and room conditions. Office environments are usually taken as clean; production area environments as medium. The depreciation for yellowed lenses or generally dirty fixtures was also factored in. The following dirt depreciation factors were used: very clean, 0.87; clean, 0.81; medium, 0.75; dirty, 0.68; very dirty, 0.61.

As stated in Section 4, the present-fixture calculation factors were adjusted to try to approximate the observed conditions. The reader must be cautioned, however, that the fixture selections and depreciation factors are only approximations, and are meant to present a situation showing where changes in fixture components can be made to increase efficiencies and improve lighting quality.

<u>Proposed Avg. Calc. FC</u> - The average foot-candles calculated for the changed fixtures, either retrofits or new. Illuminance contours are presented for each room in Volumes IIA - IIE and should be consulted for a more accurate analysis of the lighting calculations. Reflectances were assumed to remain the same as the present case.

<u>Proposed LLF</u> - The light loss factor used for the new or retrofit fixtures. Electronic Ballast factor was taken as 0.88 - 0.90, lamp depreciation as 0.9, dirt depreciation as 0.87 (assuming fixtures are cleaned). Fixtures retrofit with reflectors would be considered as new (dirt depreciation = 1.0). Lamps above a porous ceiling grid had a miscellaneous depreciation factor added to account for light loss.

7.0 BUILDING FIXTURE CHANGEOUT DATA

The following tables summarize the fixture changes by room in each building. The tables are divided into two sections; (1) fixtures removed and installed; and (2) fixtures upgraded. General descriptions and numbers of the fixture types are included below each table; specifics of each fixture type are included with the detailed calculations in Volumes IIA-IIE.

The upgrade portion of the table shows the numbers of lamp and ballasts removed, the number of T8 lamps, electronic ballasts and reflectors installed, and the number of lampholders removed.

8.0 REVIEW COMMENTS AND RESPONSES

PROJECT: EEAP, LIGHTING STUDY, PINE BLUFF ARSENAL, DACA01-94-D-0038, DELIVERY ORDER NO. 0001

REVIEWER: EMMERLING

DATE: 19 APR 95

CMT#	REF	COMMENT
1	GEN	Provide summary table with the following for each room, each building: Room classification per AEI (if applicable), AEI FT-C, AVG FT-C present, AVG FT-C proposed, AVG FT-C measured, light loss factor, reflectances for floor, wall, and ceiling for present and proposed.
2	GEN	Provide tab for each building in the detailed calculations volumes.
3	GEN	Label all point by point calculations as present or proposed OMN each sheet or define as notes.
4	GEN	Provide assumed hours of wattage and ballast for each building used in LCCA. Survey forms did not show hours of operation.
5	GEN	Provide assumed lamp wattage and ballast for each building used in LCCA. Survey forms did not show lamp wattage in some areas.
6	GEN	Provide narrative w/all assumptions on LTG calcs. Describe present and proposed.
7	GEN	Need to arrange point by point sheets IAW project calculation summary, Building 10-020.
8	GEN	Provide backup data for LLF, why is LLF different for present and proposed.
9	GEN	provide coefficient of utilization for present and proposed on point by point, each room, each building.

10	GEN	Provide brief description of retrofit for each room, each building. This is needed to verify calcs and estimate.
11	GEN	Some buildings contained present LTG calcs but no proposed. Explain in narrative.
12	GEN	Did not find area dimensions on some proms in buildings survey sheets on 10-030, 13,010, 31,080, 32, 070, 32-100, 31-130, 32-150, 33-530, and 34-120.
13	GEN	Is estimate provided in FY 95 dollars? Provide cost growth and escalate to award year per Pine Bluff arsenal DPW.
14	Volume I, 2-1	Add buildings 1-9 (First nine buildings).
15	Volume I, Fig 2-5	"TOTAL" should be "AVERAGE"
16	Volume I, Table 4-3	Divide "Lamps Removed" into "Standard" and "Watt-misers"
17	Volumes IIA-IIE	Include cut sheets on fixtures
18	Volumes IIA-IIE	Include specifications on lamps, ballasts and reflectors
19	Volumes IIE Appendix D	Remove AP&L bill

MOBILE DIST. OFFICE PROJECT REVIEW COMMENTS DATE: 8 May 95 PAGE 1 of 1

TO: Army Corps of Engineers PROM: (Section): EN-DM
Little Rock District (Reviewer): Robert S. Woodruff

PROJECT: Lighting Survey of Existing Buildings
LOCATION: Pine Bluff Arsenal, Arkaneas Ro.:

Type of Action: Interim Submittal

Item No.	Drawing No. Or Par. No.	COMCERTS	Review Action
1.	Vol. 1 P. 2-2 Para. 2.3.1	This paragraph addresses an increase in the energy consumption and then tells the reader why there was a decrease in the energy consumption.	
2.	Vol. 1 P. 2-11	The summer and winter Energy costs appear to be reversed. Please verify.	
3.	General	Excellent Interim Submittal. The data, methods, calculations and conclusions are well presented. The conclusions are logical.	

RESPONSES TO EMMERLING COMMENTS

CMT#

- 1. See Volume I, Section 6.0.
- 2. Provided.
- 3. Provided as explanation in Volume IIA.
- 4. See Volume I Section 4.0, page 4-5.
- 5. Lamp wattages and ballasts are contained in detailed calculations, Volumes IIA through IIE.
- 6. See Volume I, Section 6.0.
- 7. Notes; instructions provided to recipients.
- 8. See Section 6.0.
- 9. Included with fixture data; see Volumes IIA-IIE.
- 10. See Volume I, Section 7.0 for summary tables. Data are also included in detailed calculations, Volumes IIA-IIE.
- 11. Rooms for which there are no proposed lighting calculations are those with infrequent operating hours such as janitor's closets, etc.
- 12. Area dimensions were taken from drawings.
- 13. Cost escalations are provided in project documentations Volume IV.
- 14. Added.
- 15. Corrected.
- 16. Provided.
- 17. Included.
- 18. Included.
- 19. Removed.

RESPONSES TO WOODRUFF

ITEM

- 1. Corrected.
- 2. Typographical error on winter energy cost should be \$0.0258/kWh.
- 3. Noted thank you.
